# ABOUT US

Plastic has become the biggest problem on the earth and for our environment. For more than 2 years we have been hearing of how single-use plastic ware end up in our landfills and oceans, where they harm marine life and release toxic pollutants. we're now even able to trace micro-plastics in our food sources.

Government of India banned single use plastic in 25 states of India, but with lack of alternatives and low consumer awareness, illegal trade of plastic disposables is still continuing. Although plastic recycling is one of the solutions but it is a poorly managed business in India . Due to lack of technology and training to recycle different plastics, unscientific segregation is done by untrained rag pickers which rather causes harm to environment.

India has largest bamboo cover in the world. Bamboo is non wood biomass available abundantly in India. Government of India is promoting bamboo cultivation across major bamboo states to enhance farmers livelihood in poor agriculture regions of India. But due to lack of technology and industrial applications, the commercial value of bamboo crop is still very low for the farmers.

Each of our actions have an impact on the world around us. What we choose today have an impact on tomorrow. Therefore choose wisely.

BIOMIZE Bamboo ware is made out of bamboo and therefore 100% bio - degradable, Compostable and Eco - friendly. All of our products are reusable and when disposed off at the end of its life cycle, can be composed easily without any complex recycling process.

At BIOMIZE, we are committed at developing Eco - friendly, bio-degradable and sustainable alternatives that are commercially viable as well as cost effective. We at Biomize work on technologies that can replace plastic with 100% biodegradable materials.
